

php\php_parse.php(token-based Parser)

Grammar

$$G=(\Sigma,A,S,R)$$

whereas Tree T is parsing-tree for G if,

- S labels the root
- A labels inner nodes
- Leaves are labeled with $\{\epsilon\} \cup \Sigma$
- and inner nodes and leaves are following the rule R

Attributes

Sets

$M_1 = \{\text{private, public, protected}\}$

$M_2 = \{\text{const}\}$

$S = \{\text{static}\}$

$V = \{\text{\$var}\}$

$A = \{ = \text{'assignment'} \}$

$C = \{\text{var}\}$

$A \in \{ P(\{x \in M_1, y \in S\}), \{y \in S, x \in M_1\} \}$

$B \in M_2$

$v \in V$

$a \in A$

$c \in C$

Rule R

$S \rightarrow A \mid B$

$A \rightarrow v \mid va$

$B \rightarrow ca$

Parsetree

Examples

public static \$val	$S \rightarrow A \rightarrow v$
private \$val	$S \rightarrow A \rightarrow v$
protected static \$name = 'assignment'	$S \rightarrow A \rightarrow va$
public \$name = 'assignment'	$S \rightarrow A \rightarrow va$
const name = 'assignment'	$S \rightarrow B \rightarrow ca$

Methods

Sets

$M_1 = \{\text{private, public, protected}\}$
 $P_1 = \{\text{array, callback}\}$
 $P = \{\text{\$var}\}$
 $P_2 = \{= \text{'assignment'}\}$
 $F = \{\text{function}\}$
 $N = \{\text{function name}\}$
 $S = \{\text{static}\}$
 $A = \{\text{final, abstract}\}$

$A \in M_1$
 $p_1 \in P_1$
 $pv \in P$
 $pa \in P_2$
 $s \in S$
 $f \in F$
 $a \in A$
 $n \in N$

Parameter variation

$P = \{pv, \{p_1, pv\}, \{p_1, pv, pa\}, \{pv, pa\}\}$
 $p \in P$

Access type variation

$x = \{A, a, s\}$

$M_2 = \sum_{k=1}^3 \{(x_1, \dots, x_k) \mid x_i \in \{1, \dots, n\}, x_i \neq x_j \text{ for } i \neq j\}$

$M_2 = \{\emptyset, M_2\}$

$M \in M_2$

Number of elements = $|M|$

Rule R

$S \rightarrow M$

$M \rightarrow \text{fn}$

$\text{fn} \rightarrow p \mid \emptyset$

Parsetree

Examples

public static function getName()

$S \rightarrow M \rightarrow \text{fn} \rightarrow \emptyset$

private static final function getName()

$S \rightarrow M \rightarrow \text{fn} \rightarrow \emptyset$

abstract function getName()

$S \rightarrow M \rightarrow \text{fn} \rightarrow \emptyset$

protected final function getName(array \$nameList)

$S \rightarrow M \rightarrow \text{fn} \rightarrow p$

function getName(callback \$nameFunc)

$S \rightarrow M \rightarrow \text{fn} \rightarrow p$

Classes

Sets

$C = \{\text{class}\}$

$N = \{\text{class name}\}$

$IN = \{\text{interface name}\}$

$A = \{\text{final, abstract, } \emptyset\}$

$I = \{\text{implements}\}$

$E = \{\text{extends}\}$

$c \in C$

$n \in N$

$in \in IN$

$a \in A$

$i \in I$

$e \in E$

Rule R

$S \rightarrow ac$

$ac \rightarrow n$

$n \rightarrow \emptyset \mid en \mid iin \mid eniin$

ParseTree

Examples

class myclass

$S \rightarrow ac \rightarrow n \rightarrow \emptyset$

final class myclass

$S \rightarrow ac \rightarrow n \rightarrow \emptyset$

class myclass extends superclass

$S \rightarrow ac \rightarrow n \rightarrow en$

class myclass extends superclass implements iface $S \rightarrow ac \rightarrow n \rightarrow eniin$

Interfaces

$I = \{\text{interface}\}$

$N = \{\text{interface name}\}$

$E = \{\text{extends}\}$

$i \in I$

$n \in N$

$e \in E$

Rule R

$S \rightarrow in$

$in \rightarrow \emptyset \mid en$

Parsetree

Examples

interface IFace

$S \rightarrow in \rightarrow \emptyset$

interface IFace extends SuperIFace $S \rightarrow in \rightarrow en$
